Pumping Water Pumping Honor

Company profile

Nanfang Pump Industry Co.,Ltd (CNP),as a subsidiary of Nanfang Zhongjin Environment Co.,Ltd, was founded in 1991,and listed on Shenzhen Stock Exchange on December 9,2010 with stock code 300145.

In 2019, CNP's annual output exceeded 900,000 units/set with nearly 3 billion sales revenue, continuing to maintain high growth.

As a national enterprise technology center, CNP has flagship ultra-high efficient product -new generation CDM (F) light vertical multistage centrifugal pump, $MEI \geq 0.7$. Same series high temperature pump products are developed in 2019 to satisfy high temperature applications. All light stainless steel pump product series grow stably. Advanced frequency conversion water supply equipment has been innovated to the 6th generation. Fire pump and diesel engine have obtained UL certification. TD in-line pump, NIS/NISO end suction pump, NSC split casing pump, WQ sewage pump, PQ stainless steel fountain submersible pump, BP silent tube pump, pool pump, non-blocking self-priming sewage pump, metering pump, oil pump and other pump products, can meet various application needs of different fields.

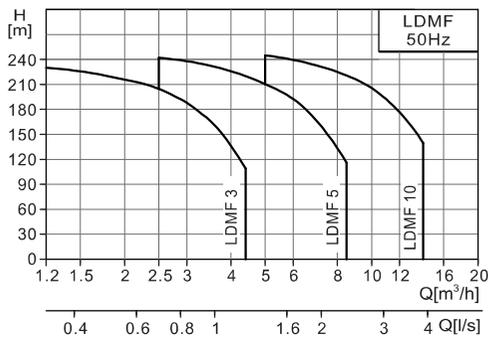

CNP has a complete sales network both in domestic and overseas market,exporting to over 60 countries and regions, maintaining long-term and strong relationship with our clients. CNP pumps have been widely applied in various fields like water treatment、water supply and drainage、HVAC、industrial application、seawater desalination、energy and power etc.

CNP, a green water expert beside you.

Performance range

Summary

LDMF series pump is low NPSH vertical multistage centrifugal pump specially developed for high temperature medium and harsh inlet working condition. The inlet passage is optimized to effectively improve pump suction performance, reduce noise and prevent damage caused by cavitation. The product has excellent cavitation performance, compact structure, easy maintenance, high reliability, long service life and beautiful appearance.

Application

Boiler feed water;
High temperature circulating water occasions;
Metallurgy, coking, light textile, chemical industry;
Water heating and waste heat utilization system;
Hot water circulation in pipeline or closed loop;
Transport of heat exchange medium.

Motor

TEFC, 2-pole motor;
Protection class: IP55;
Insulation class: F;
Standard voltage: 50Hz 1×220V
3×220V / 380V
3×380V

Performance scope

Description	LDMF			
Model	3	5	10	
Rated flow [m³/h]	3	5	10	
Rated flow [l/s]	0.83	1.39	2.78	
Flow range [m³/h]	1.2~4.4	2.5~8.5	5~14	
Max. pressure [l/s]	0.33~1.22	0.69~2.36	1.39~3.89	
Max. pressure [bar]	23	24	24	
Power [kW]	0.37~3	0.55~5.5	1.1~11	
Temp. [°C]	-15 ~ +120			
Max. efficiency [%]	58	70	72	
Pipelines	DIN Flange	DN25	DN32	DN40
	Cutting ferrule joint	DN32	DN32	DN50
	Pipe thread	R1¼	R1¼	R2
	Oval flange	G1	G1¼	G1½

Working condition

This pump is applied for thin, clean, non-flammable, non-explosive, solid free, fiber free, physically and chemically water-like liquid.

Liquid temperature:

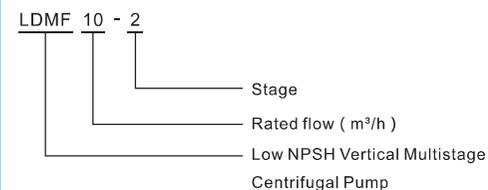

Normal temperature type : -15°C to 70°C

Hot water type : -15°C to 120°C

Ambient temp.: up to 40°C

Altitude: up to 1000m

Model definition

Curve conditions

The requirements applies to all the performance curves below:

- All curves are based on the measured value of the motor at a constant speed of 2900rpm.
- Curve tolerance in conformity to S9906:2012, grade 3B.
- Measurement is done with 20°C air-free water, kinematic viscosity of 1mm²/sec.
- Pump use should refer to the performance range of the bold curve to prevent overheating by too little flow or motor overload by excessive flow.

Max. working pressure

Connection	Max.working pressure (bar)
Flange/Cutting ferrule/ Pipe thread	25
Oval flange	16

Min. inlet pressure

In case that the pressure in pump is lower than the steam pressure used to convey liquid, the cavitations will occur. To avoid cavitations, a minimum pressure at the inlet side of the pump shall be guaranteed. The maximum suction stroke can be calculated with following formula:

$$H = Pb \times 10.2 - NPSH - H_f - H_v - H_s$$

Pb= Barometric pressure in bar.

(Barometric pressure can be set to 1 bar).

In a closed system, Pb means system pressure [bar].

NPSH= Net Positive Suction Head [m]

(It can be read from the point of possible max.

Flow rate shown on NPSH curve.)

Hf =Pipe friction loss at the inlet[m].

Hv= Vapour pressure [m].

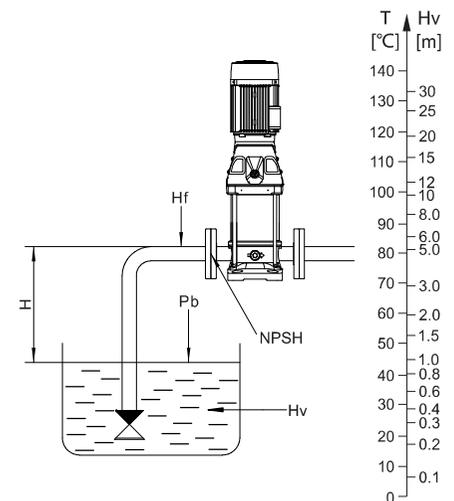

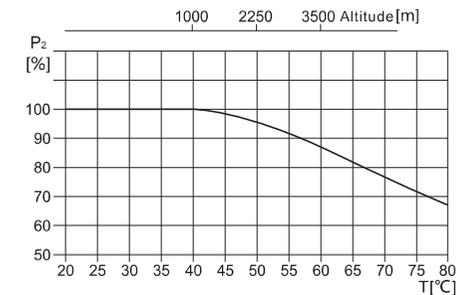

Hs= Safety margin= minimum 0.5 meters head.

If the "H" calculated is positive, the pump may run under the max. suction stroke H

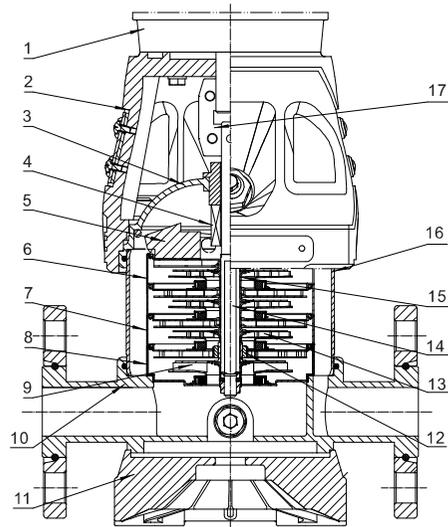

If the "H" calculated is negative, a head of minimum inlet pressure H is required.

Max. ambient temperature & altitude

When the pump operates at ambient temperature over 40°C or at altitude higher than 1000m, motor output power P₂ will be reduced to a certain extent due to poor cooling effect caused by low air density. Motor power needs to be increased when the pump is running under the above conditions.

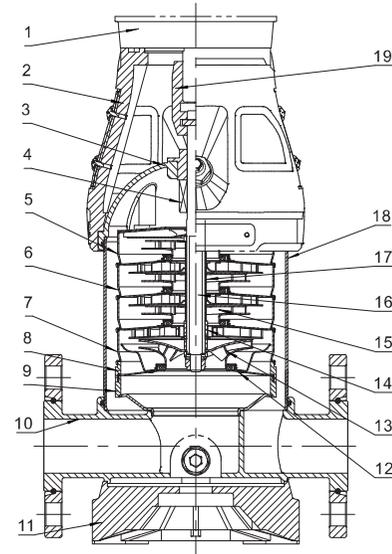

LDMF3,5 Sectional drawing

LDMF3,5 Material list

No.	Name	Material	AISI/ASTM
1	Motor		
2	Pump head	Cast iron	ASTM25B
3	Lining	Stainless steel	AISI304
4	Mechanical seals	Tungsten carbide/graphite	
5	Top diffuser	Stainless steel	AISI304
6	Diffuser	Stainless steel	AISI304
7	Support diffuser	Stainless steel	AISI304
8	Inducer	Stainless steel	AISI304

LDMF10 Performance curves

Note: P2n represents the power curve of the first impeller.

LDMF10 Performance table

Model	Motor (kW)	Q (m³/h)	0	5	6	8	10	12	14
10-1	1.1	H (m)	13.5	13	13	12.7	12.5	12.5	12
10-2	1.5		24.5	24	23.3	23	21	19	17
10-3	1.5		36	34	34	32	30	27	24
10-4	2.2		47	45	44	42	38.5	34	29.5
10-5	2.2		58	55	54	52	47.5	42	35.5
10-6	3		69	66	65	62	56.5	49	41.5
10-7	3		81	77	76	73	66.5	57	47.5
10-8	4		92	88	87	83	75.5	65	53.5
10-9	4		104	99	97	93	84.5	72	59.5
10-10	4		115	110	108	102	93.5	81	65.5
10-11	4.5		126	121	118	112	102.5	89	71.5
10-12	5.5		139	132	130	123	111.5	96	77.5
